SiteStats

Introduction

The Sakai SiteStats tool allows authorized users to view site usage statistics. Statistics are organized in two screens:

- Overview: summary of the most interesting site usage statistics
- Reports: user-defined/predefined printable and exportable detailed reports about site visits, tool activity and resource activity.

A complete list of features is available [here](#).

SiteStats is highly configurable - take a look at the [configuration](#) and [performance](#) pages for more information.

Feel free to send suggestions to ufpuv-suporte@ufp.pt or by using the [SiteStats JIRA section](#).
