

# Outstanding CKEditor Issues

## Outstanding Issues or Requests for CKEditor Integration

This page is a catchall reference for the current status of the CKEditor integration. It should capture work completed as well as concerns or work outstanding and be the preferred point of contact during the 2.8 QA phase.

### Known Issues

- Dimensions are goofy - sizing isn't quite as requested and `setMainFrameHeight` ends up with scrollbars sometimes
- [SAK-17886](#) - Resource Search plugin needs porting
- RSF, Wicket, Ambrosia, other UI toolkits do not use the new binding yet

### Things to Consider

- Toolbar buttons
- Other configuration
- No integrated file uploader (FCKEditor feature gap)

### Work Completed

- [SAK-17880](#) - Initial CKEditor integration and generic editor binding

### Other Notes

Tools using Sakai JSF, Velocity, or other support need to be repackaged to pick up the new binding mechanisms. These tools do not need other changes. For example, the Velocity macro `chef_setupformattedtextarea` and JSF tag `sakai:inputRichText` are still available and provide the new functionality.
