Contrib: News Feeds

Leads: [Nuno Fernandes](#)

Introduction

News Feeds is a feed aggregator tool developed for Sakai. The tool supports multiple feeds, user-provided feeds or selection from pre-configured institutional list, BASIC/DIGEST authentication and feed attachments (enclosures). Please see the [Features](#) page.

Feel free to send suggestions to ufpuv-suporte@ufp.pt or by using the [NewsFeeds JIRA section](#).

 - [2.6.x branch](#) (recommended for Sakai 2.6.x)
- Trunk: [trunk](#) (for Sakai 2.7)

Changes: [Browse JIRA changes per release](#)

JIRA: <http://bugs.sakaiproject.org/jira/browse/NFS>

Status/Plans:

- **27-Feb-2008** Project created.

The screenshot shows the 'News Feeds' application interface. At the top, there are navigation links: 'Refresh', 'Subscriptions', 'Options', and 'Permissions'. Below this, there's a 'View' dropdown set to 'Last 5' and a 'Details' button. The main content area displays a list of news items, each with a title, a brief description, and a link to the source. The first item is titled 'Últimas notícias RTP (5)' and contains several news snippets, such as 'Bolsa: Euronext Lisboa abre a descer 2,67 por cento' and 'França: Supressão de 2.000 empregos no Grupo PSA Peugeot Citroën'. Below the news items, there are sections for 'recent posts - blip.tv (beta) (5)', 'Test Feed (HTTP Auth, SSL, realm, S2S) (8)', and 'paufr (5)'. Each section has a 'Details' button next to it.
