

Help settings in the Charon Portal

Sakai 2.1

Display of Help in the Charon portal can be disabled using the sakai.properties settings:

```
helpEnabled=false
```

However, this currently only disables display of the Help icons on tool titlebars, rather than the Help link added to site menubars.

Sakai 2.2

As from Sakai 2.2, Help can be globally disabled on either site menubars or tool icons using the sakai.properties settings:

```
display.help.menu=false  
display.help.icon=false
```

[SAK-3146](#) is a feature request for the ability to disable help on a per-site basis.
