

sakai.properties changes (2.x)

 [SAK-13403](#) - Update user module to change the auth caching mechanism and fix some related issues

CLOSED

: WebDAV authentication cache.

The properties associated with the WebDAV authentication cache have changed. In Sakai 2.6.0 and earlier the following properties were used:

```
maximumSize@org.sakaiproject.user.impl.AuthenticationCache
timeoutMs@org.sakaiproject.user.impl.AuthenticationCache
failureThrottleTimeoutMs@org.sakaiproject.user.impl.AuthenticationCache
```

These settings have been replaced as of Sakai 2.6.2 with:

```
maxElementsInMemory@org.sakaiproject.user.api.AuthenticationManager.cache
timeToLive@org.sakaiproject.user.api.AuthenticationManager.cache
```

[SAK-6545](#) - Switch default page in Preferences to Customize Tabs CLOSED : New `preference.pages`

property

This property controls page order and visibility in the Preferences tool. The property takes comma-separated list of values identifying the pages (and toolbar actions) to display. Available pages are `Notifications`, `Customize Tabs`, `Time Zone` and `Language`. Below is an example of `preference.pages` setting:

```
preference.pages=prefs_tab_title, prefs_noti_title, prefs_timezone_title, prefs_lang_title
```

The order of values in the comma-separated list determines page order and also the order of actions in the toolbar. If a value is missing, that page's action will not appear in the toolbar and the page will not be reachable via the UI. If the `preference.pages` property is not set, page order will be the (current) default.

If you remove

```
enable.privacy.status = true
```

you can achieve a similar effect by defining `preference.pages` as follows:

```
preference.pages=prefs_tab_title, prefs_noti_title, prefs_timezone_title, prefs_lang_title, prefs_privacy_title
```

 [SAK-13403](#) - Update user module to change the auth caching mechanism and fix some related issues

CLOSED

: WebDAV properties changes

The properties associated with the WebDAV authentication cache have changed. In Sakai 2.5.0 and earlier the following properties were used:

```
maximumSize@org.sakaiproject.user.impl.AuthenticationCache
timeoutMs@org.sakaiproject.user.impl.AuthenticationCache
failureThrottleTimeoutMs@org.sakaiproject.user.impl.AuthenticationCache
```

These settings have been replaced as of Sakai 2.5.2 with:

```
maxElementsInMemory@org.sakaiproject.user.api.AuthenticationManager.cache
timeToLive@org.sakaiproject.user.api.AuthenticationManager.cache
```

SAK-10762 - Modify WS Setup to allow for adding participants via email address CLOSED : Worksite Setup /Site Info properties changes (pre-2.5 to 2.6 upgrade)

In Worksite Setup/Site Info the names of properties associated with the ability to add participants via email address have changed:

Old Name (Sakai 2.4 and earlier)	New Name (Sakai 2.5.0 and later)
invalidEmailInIdAccountString	invalidNonOfficialAccountString
noEmailInIdAccountName	officialAccountName
noEmailInIdAccountLabel	officialAccountLabel
emailInIdAccountName	nonOfficialAccountName
emailInIdAccountLabel	nonOfficialAccountLabel
emailInIdAccount.url	nonOfficialAccount.url
emailInIdAccountInstru	nonOfficialAccountInstru
noEmailInIdAccountValue	officialAccountValue
emailInIdAccountValue	nonOfficialAccountValue

SAK-13205 - Permissions for CIG Participant are empty for 2.5 upgrade CLOSED : Portfolios (OSP) permission settings (pre-2.5 to 2.6 upgrade)

If you are upgrading from a pre-2.5.0 version of Sakai, then you need to force conversion of the OSP permissions by setting `osp.upgrade25=true` in your `sakai.properties` file. (See also [discussion](#).)

SAK-10451 - move report and data warehouse into sakai trunk CLOSED : Portfolios (OSP) reports property changes (pre-2.5 to 2.6 upgrade)

Those upgrading from a pre-2.5.0 version of Sakai need to change `osp.reports.useWarehouse` to `sakai.reports.useWarehouse`.
