

Mobile UX

Overview

Based on the Mobile BOF at the 10th Sakai Conference, we would like to continue the discussion of what functions or capabilities are relevant to the mobile platform as well as what kind of UX we would like to create for mobile users. None of us seemed prepared to offer "the answer" - we all seem to be seeking the answer. There is an opportunity for us to seek the answer together - and that is what this space is all about.

Design Notes

[Mobile Actors](#)

[Mobile Requirements - QFD](#)

Who/What/Where?

Institution	Contact	Interests	Work to Date	Other Comment
University of Michigan	Sean Michael DeMonner		Have done some testing on PDA portal	Would like to investigate disaggregation of data via web services vs. building specific mobile UIs
UC Davis	Thomas Amsler		Have done some testing on PDA portal. Looked into iPhone specific GWT UI design	
Oxford	Adam Marshall	Smart-phone interface via JSON hopefully using MIT mobile framework. We are speaking to UCT & Michigan and others		http://erewhon.oucs.ox.ac.uk/
Indiana University	Bryan Holladay (old account)		Extended EntityBroker to supply information needed for IU's MIT mobile framework implementation.
