Release Management

Sakai release support is subject to the availability of community and volunteer resources. Generally this will include the current release and prior releases for which there is a sufficiently large institutional user base. The [Sakai Core Team](#) maintains an email list at sakai-core@apereo.org (<mailto:sakai-core@apereo.org>)

Implementers are encouraged to deploy Sakai release tags or source or binary artifacts. A number of schools use maintenance branch code in production in order to pick up bug fixes as they become available. The project teams providing fixes provide a minimal level of testing, however, a great deal of community QA is achieved for each fix by relying on the local QA processes of organizations preparing the fixes for deployment to production. (See the [Release Practice Guidelines](#) for further information on how and what goes into these branches.)

Process and Practice

Links to documentation describing important aspects of Sakai's release management practices and processes:

- [Release Practice Guidelines](#) - Community expectations and practices surrounding the management of the various Sakai release and branch types (i.e., Major Release, Maintenance Branches, Maintenance Releases, Jira Branches, Feature Branches, and Trunk). (See also [Jira Guidelines](#).)
- [Security Guidelines](#) - Our policy for reporting, handling, and resolving security related issues in Sakai.
- [Release Management Meetings](#) - Generally weekly discussions of how work on releases and maintenance branches is proceeding.
- [Tool and Service Scorecards](#) - A "Scorecard Working Group" formed to tackle the issue of how to improve upon the current Core/Provisional/Contrib Tool Status system and its criteria. The goal being a scorecard-like system to provide the release team with guidance on what to include in a release, and organizations deploying Sakai a comparative evaluation of tools' and services' capabilities.
