

UX Testing at Open Apereo 2015

UX testing was conducted at Open Apereo 2015. Each usability test was conducted as a 15 to 20 minute one-on-one session. Sessions were conducted on a first come first serve basis during the UX testing time block. This was a great opportunity for attendees to experience usability testing first hand and share their impressions and opinions about Sakai interface design. We looked at the Morpheus interface during this testing, so participants got a chance to provide feedback on the new responsive design that is in the works for Sakai 11.
