Subject: Kernel 1.0 RC-1

For those watching the Source code commits, you may have noticed a
number of commits going past with the word Kernel In them.

I have been attempting to extract a kernel from the current trunk, to
do a 1.0 release candidate.
The aim of the 1.0 RC will be to provide a snapshot that provides the
same code base as in the 2.5 core release of Sakai, repackaged into a
different maven structure, that makes it work as a single unit. The
result of this can be found at

https://source.sakaiproject.org/svn/kernel/tags/K-1.0-RC1

and both SNAPSHOT versions and the K-1.0-RC1 version are in the sakai
maven repo at

https://source.sakaiproject.org/maven2/org/sakaiproject/kernel

binary, source and javadoc
(or at least they should be there when the upload completes, in about
1h)

This contains no Java or Jar changes, only a re-organization of the
maven groupID's build to make it possible to work on an identified
kernel.

There is also maven site build (SNAPSHOT) from the kernel at

http://www2.caret.cam.ac.uk/sakaikernel/index.html

This is only one small step, in many :)

It would be helpful if those who care about the kernel, have a look
and say what should be done before the RC1 becomes final, but
remember, this is only a snapshot in time that will serve as a
starting point for more work.

The reorganization has maintained all svn history, and so it should
be possible to merge changes in the existing trunk modules into the
kernel space..... if svn can cope with the re-factoring of layout.

Ian
