 - Fluid scenario description: [<http://wiki.fluidproject.org/display/fluid/Scenarios>]
 - provide a (fictitious) name and a couple of sentences about each of they key players.
 - include a description of the primary purpose and key characteristics of the process and product.
 - describe the workflow and interactions among the participants (who's involved when, what are they doing and why, what do they need in order to achieve their specific goals within the process).
- **Ways of categorizing portfolios:** Is proposed taxonomy useful for describing needs and identifying personas related to portfolio? Bob S proposes thinking about common functionalities or activities instead (e.g., collect, select, reflect, annotate, guide, review, evaluate, report, present, etc. see Portfolio-related vignettes in confluence).
