

# Ready to Dissect Zimbra

After considerable pushing and pulling, I've got a local instance of ZCS 5.0 running in a virtual machine of Ubuntu on my mac.

Ready to dissect CalDAV!

The screenshot shows the Zimbra administration interface. The top navigation bar includes the Zimbra logo, search fields, and user information for 'admin@zachbuntu.local'. The left sidebar contains several menu sections: 'Addresses' (Accounts, Aliases, Distribution Lists, Resources), 'Configuration' (Class of Service, Domains, Servers, Zimlets, Admin Extensions, Global Settings), 'Monitoring' (Server Status, Server Statistics), 'Tools' (Mail Queues, Backups, Certificates), and 'Searches' (Inactive Accounts (90 days), Locked Out Accounts, Non-Active Accounts, Inactive Accounts (30 days), Admin Accounts, Closed Accounts, Maintenance Accounts). A yellow banner at the bottom left states: 'Your Zimbra Network trial license will expire in 61 days'.

The main content area is titled 'Server Status' and shows a table of services for the server 'zachbuntu.localdomain'. The table has three columns: 'Server', 'Service', and 'Time'. All services are listed with a checkmark in the 'Server' column and a timestamp of 'Apr 16, 2008 4:42 PM (data is stale)' in the 'Time' column.

Server	Service	Time
✓ zachbuntu.localdomain	✓ antispam	Apr 16, 2008 4:42 PM (data is stale)
	✓ antivirus	Apr 16, 2008 4:42 PM (data is stale)
	✓ ldap	Apr 16, 2008 4:42 PM (data is stale)
	✓ logger	Apr 16, 2008 4:42 PM (data is stale)
	✓ mailbox	Apr 16, 2008 4:42 PM (data is stale)
	✓ mta	Apr 16, 2008 4:42 PM (data is stale)
	✓ snmp	Apr 16, 2008 4:42 PM (data is stale)
	✓ spell	Apr 16, 2008 4:42 PM (data is stale)
	✓ stats	Apr 16, 2008 4:42 PM (data is stale)
