

Sakai 3 ePortfolio

Sakai 3 ePortfolio

Please list your institution's high level requirements and/or ideas for ePortfolios in the Sakai 3.0 release.

Cambridge (ideas)

1. Staff and students should find it easy to maintain public profile pages with a combination of key data from existing systems and free-form web page composition. This support should enable

- Institutional templating with configurable rigidity (from blank pages, through sample content to be replaced, to enforced structure and volume)
- Multiple profiles for different audiences (with easy access control if required)
- Export/Import to other systems as institutional affiliation ends
- Snapshots for assessment by other services and recording of grades against snapshot
- Recommender systems to add value to data by revealing potential shared interests based on academic work
- Ease of publishing to other media, e.g. pdf of resume

2. It should be possible for Sakai to create a longitudinal record of a student's work at an institution that goes beyond transcripts. Scope should be configurable by institution, but assignments, discussion postings and faculty feedback are all candidates
