

# Sakai 10.3 changes

## Summary of Highlights

- Sakai 10.3 includes about 200 fixes.
- Oracle
  - Sakai 10 Oracle upgrade scripts. [Please use database upgrade scripts from trunk for Sakai 10.x](#)
  - Fixed a problem with assessment submission on Oracle systems
- Tomcat 7.0.56 compatibility and later versions of 7.
- Assignments -New anonymous grading feature
- Gradebook - Display of letter or points controlled by properties.
- Lessons - New property in Lessons to allow Lessons material to be stored in a single folder.
- Samigo Test and Quizzes
  - Add/Edit Parts interface has been improved.
  - Ability to transfer ownership of question pools
- Security issues - eight security fixes

## Known Issues

- Lessons - Some sites might want to look at using 10.x for lessons rather than the 10.3 tag. the direct URL button doesn't work. It didn't work in 10.2 either, so this isn't a regression exactly, but it fails more visibly. You can see what differs between the two by looking for the 10.4 tag for the Lessons project in Jira. Part of the problem was trying to support both the way the direct link worked in 2.9 and 10. It now works as in 10 even when running in 2.9.

## New Properties

| Property   | Default value          | Description   | Jira  |
|--|------------------------|---|---|
| syllabus.<br>new.<br>published.<br>default   | false                  | If true then syllabus items are published by default.   |  <a href="#">SAK-27817</a> - Add property to make newly created syllabus items published <span>CLOSED</span>                     |
| assignment.<br>anon.<br>grading.<br>enabled  | false                  | If true then enable anonymous grading for assignments.  |  <a href="#">SAK-28076</a> - Provide sakai.property toggle for anonymous grading in assignments <span>CLOSED</span>            |
| gradebook.<br>coursepoints.<br>displayed<br><br>gradebook.<br>coursegrade.<br>displayed<br><br>gradebook.<br>assignments.<br>displayed | false<br>false<br>true | There are two checkboxes in the gradebook options (As of Sakai 11, 1 prior) for display course grade and display course points. We had a request to make it so that this was selected by default and that the course grade was always shown as the default option (rather than hidden). Existing settings on sites will not change (no conversion), it will just be a sakai property that can be changed, and will be the current default (false) by default so no change in behavior.  |  <a href="#">SAK-27973</a> - Add a property to allow for changing default display course grade /points <span>VERIFIED</span>   |
| accountValidator.<br>maxReminderDays   | empty                  | Sets the maximum number of days for reminders; overrides accountValidator.maxDays.<br><br>The accountValidator.maxDays sakai property is not granular enough for some instances. This patch adds accountValidator.maxPasswordResetMinutes=[Integer]. If this property is not set, there is no change. Otherwise when the user clicks on their validation link, we check if the time that their validation token was sent is within the specified threshold - if not we expire their validation token. The same check happens when the user submits the validation form. |  <a href="#">SAK-24398</a> - Add configuration for validation tokens to expire in minutes rather than days <span>CLOSED</span> |

|  |                |  |  |
|--|----------------|--|--|
| accountValidator.<br>maxPasswordResetMinutes                           | empty          | Sets the maximum TTL for reset password validation token in minutes.   | <a href="#">SAK-24398</a> - Add configuration for validation tokens to expire in minutes rather than days<br><b>CLOSED</b> |
| accountValidator.<br>checkValidations.<br>fromEmailAddress             | empty          | Make the Check Validations Job have configurable email from and name of sender. If not set, uses the value from mail.support (another Sakai property). The default for mail.support is null (empty).   | <a href="#">SAK-24393</a> - CheckValidations job sends emails with Vula hardcoded as the sender<br><b>CLOSED</b>           |
| accountValidator.<br>checkValidations.<br>fromEmailName                | empty          | ibid.  | <a href="#">SAK-24393</a> - CheckValidations job sends emails with Vula hardcoded as the sender<br><b>CLOSED</b>           |
| lessonbuilder.<br>blti_tools.<br>count<br>lessonbuilder.<br>blti_tools | empty          | <p>Allow a BLTI tool to be configured in sakai.properties so that it appears in the list of item types in "Add Content" as if it were a native Sakai tool.</p> <p>Here's a sample sakai.properties entry:</p> <pre>lessonbuilder.blti_tools.count = 1 lessonbuilder.blti_tools.1 = 14,"VoiceThread Assignment","Assignment using VoiceThread, a cloud-based application that allows students to comment on videos, using audio, video or text", "Add a new VoiceThread assignment","Use this link to add a new VoiceThread assignment to your site. The first time you click on it, it will let you go into VoiceThread's assignment builder to design the assignment"</pre> <p>(The list is parsed with Sakai's usual OpenCSV CSV parser.) Items in the list are</p> <ul style="list-style-type: none"> <li>• LTI tool ID. See below</li> <li>• Title - will appear in Add Content as the main title, and as the main header in the chooser dialog</li> <li>• Description - will appear in Add Content as the description, and the first thing in the chooser dialog</li> <li>• Link text - this will be the text of the link for adding a new item</li> <li>• Link explanation - this will appear in the chooser dialog under the link, as a further explanation of how the tool works. It is displayed verbatim, so you can include HTML markup. (That's not true of the other fields.)</li> </ul> <p>Unfortunately the only unambiguous identifier for a BLTI tool is the tool ID. But it doesn't show in any obvious way in the UI. As Administrator, go into the "External tool" administrative screen. Choose "Tools available in system." Find the tool you want to use. Do "inspect element" on the Edit link. You'll see an argument id=NNN at the end of the URL. That's the tool ID.</p> | <a href="#">SAK-38241</a> - allow BLTI tools to show up in the "add content" menu as normal tools<br><b>CLOSED</b>         |
| lessonbuilder.<br>basefolder   | no base folder | <p>Put folders created by Lessons inside a single base folder. If you upload files through Lessons, Lessons will put them in folders that Lessons creates. It creates one folder per Lessons page, named with the title of the page.</p> <p>This property adds a single top-level folder in which all the per-page folders are put. A typical value would be lessonbuilder.basefolder=Lessons</p>  | <a href="#">SAK-37385</a> - Adding a top folder for Lessons in Resources Tool<br><b>RESOLVED</b>                           |

## New Features

[SAK-17606](#) - Please provide mechanism for anonymous grading in the Assignment tool **CLOSED**

[SAK-34877](#) - Extend the limit of 4000 in the answer text field for Multiple Choice question **CLOSED**

[SAK-34855](#) - Add ability to transfer ownership of question pools. **CLOSED**

[SAK-27928](#) - Resources Drag and Drop no Email Notifications **CLOSED**

[SAK-37385](#) - Adding a top folder for Lessons in Resources Tool **RESOLVED**

## User interface changes

-  [SAK-27973](#) - Add a property to allow for changing default display course grade/points VERIFIED
-  [SAK-37242](#) - Improvements to Add/Edit Part interface CLOSED
-  [SAK-37229](#) - Add a "Select All" button to the copy from question pool page CLOSED
-  [SAK-27839](#) - Site Info -> Manage Groups -> Auto Groups, radio button labels are not accurate CLOSED
-  [SAK-26616](#) - Forum: hide rank image if not set CLOSED
-  [SAK-28003](#) - Assignments literally searches for "Name, ID, or Email" and this can confusing CLOSED
-  [SAK-26256](#) - Improve instructions and user facing messaging in Assignments CLOSED

## Event Capture

-  [SAK-37254](#) - Post events for viewing assessment feedback and resuming an assessment CLOSED

## Technical Updates

-  [SAK-28004](#) - Updated MD5Encoder class in dav for Tomcat 7.0.56+ CLOSED
-  [SAK-27584](#) - Upgrade the JSF to 1.2 version CLOSED
-  [SAK-24398](#) - Add configuration for validation tokens to expire in minutes rather than days CLOSED
-  [SAK-27830](#) - Add spinner gif to reference for use across projects CLOSED

## Other fixed Blocker Bugs

-  [SAK-28114](#) - Can't access to Resources permission screen CLOSED
-  [SAK-36173](#) - Confirm submission button doesn't work (Oracle) CLOSED
-  [SAK-28110](#) - Javascript error when click "Cancel" button in "Move Thread" link CLOSED

## Known Issues

Sakai 10 Oracle upgrade scripts. [Please use database upgrade scripts from trunk for Sakai 10.0 and later.](#)

## List of Issues Fixed

T      Key      Summary

---

|   |           |   |
|---|-----------|---|
|    | SAK-39315 | balance deletes and inserts in KNL-800 implementation                           |
|    | SAK-39172 | Hardcoded strings for zip feature   |
|    | SAK-39006 | Number format L10N fails in assignments related to gradebook items.             |
|    | SAK-38695 | Unable to manually override MIME type   |
|    | SAK-38688 | LRS code throws exception when using extra credit                               |
|    | SAK-38682 | Using the same id in trash causes a lot of problems                             |
|    | SAK-38577 | Stop sending auto emails when adding a file                                     |
|    | SAK-38532 | NullPointerException not managed locks resources from being deleted             |
|    | SAK-38452 | Chrome 39 cannot reload PDF served via range request                            |
|    | SAK-38301 | Simplified Chinese translation for Sakai 10.3 : LessonBuilder                   |
|    | SAK-38260 | Dragging items to delete and back to reorder can cause item to still be deleted |
|    | SAK-38241 | allow BLTI tools to show up in the "add content" menu as normal tools           |
|    | SAK-37962 | Creating a URL with a long name results in an error                             |
|    | SAK-37951 | Add top folder property documentation in sakai.properties                       |
|    | SAK-37909 | "Try other alternative" not internationalized                                   |
|    | SAK-37477 | let user add caption file for embedded video                                    |
|    | SAK-37397 | allow common cartridge to be loaded through site info; Lessons support          |
|    | SAK-37385 | Adding a top folder for Lessons in Resources Tool                               |
|  | SAK-37260 | Print view for short answer questions has exclamation marks                     |
|  | SAK-37254 | Post events for viewing assessment feedback and resuming an assessment          |
