Contrib: Simple Page Tool

Lead(s): [Joshua Ryan](#)

Description:

The simple page tool allows users to create simple pages in worksites using the WYSIWYG editor, these pages can then link to things in resources if desired. It is defined as a multi tool so it can be added multiple times to the same site using the page order tool.

Status and Plans:

12-Nov-2009 Source code moved to <https://source.sakaiproject.org/contrib/simplepage/>.

Future: The plan is to keep the simple page tool simple so only small refinements and bug fixes are planned.

This tool will likely not be needed after Sakai 3.
