Sakai 2.3 Accessibility Test Protocols

There are three accessibility protocols for Sakai, which in combination help identify accessibility issues and solutions for their resolution.

They are:

- Test Protocol for Firefox Browser and the Firefox Accessibility Extension
- Test Protocol for the WAVE 3.5 Evaluation tool
- Test Protocol for the JAWS Screen Reader.

There is also a protocol that combines the Firefox Accessibility Extension and WAVE 3.5 (Recommended).

For an example of a completed form, go to http://issues.sakaiproject.org/confluence/x/8ow and look at the Sakai_Sample_Test_Template.xls.
